

Drainage Solution

for edging and surrounding area

A high capacity channel system that is available with various integral rail types ranging from Galvanised steel Cast Iron and Stainless Steel with large channel widths.

The innovative production and moulding technology and anchoring ribs ensure a secure bonding with the surrounding concrete bed.

The optimised channel geometry and the smooth surface ensure maximum flow and self-cleaning effects.

Product Range:

- Channel bodies with Galvanised Steel edge 100mm, 150mm & 200mm width
- Channel bodies with Cast Iron edge 100mm, 150mm, 200mm and the larger 300mm width
- Heelsafe, Bar and Slotted grating options available with snap-fix locking device. Grates come with security locking bolts.

Call 01744 648 400

Applications:

The system is primarily suited for installation around various surfacing edging and surrounding vulnerable areas such as dug outs on sports surfacing and lowered structures around soft play areas and car parks, but can also be effective in public pedestrian areas and residential complexes.
